

ICHITA Co., Ltd.

Separation Technologies & Process Engineering

Original Equipment Manufacturer · Chonburi, Thailand

01

Executive Summary

ICHITA is a Thai-based Original Equipment Manufacturer (OEM) specializing in separation technologies, water treatment, and process engineering solutions. With expertise spanning chromatographic purification, decolorization, and membrane filtration, ICHITA serves clients across food & beverage, pharmaceutical, and industrial sectors.

02

Core Capabilities

Chromatographic Separation SMB and batch chromatography for sugar purification, amino acids, and specialty chemicals Food & Bev · Pharma	Decolorization Systems Activated carbon and ion exchange resin systems for color removal Sugar Mills · Palm Oil	Membrane Filtration UF, NF, and RO systems for water treatment and process concentration Industrial · Municipal	Process Engineering End-to-end process design, simulation, and optimization All Sectors

03

Key Differentiators

Vertical Integration Design, manufacture, install, and commission — all in-house. No outsourcing, full quality control.	Thai Engineering Expertise Local team with deep understanding of ASEAN industrial needs and regulatory landscape.
Innovation Focus Active R&D in rare sugars (Allulose), functional ingredients, and green chemistry.	Cost Efficiency Thai manufacturing base with competitive pricing vs. European and Japanese OEMs.

04

Financial Highlights

Metric	2024	2025	2026 (Projected)
Revenue (THB M)	180	245	320
Export Revenue %	25%	35%	45%
R&D Investment %	8%	10%	12%
Headcount	45	62	80

Note: Financial figures are illustrative for this demo document.

05

Strategic Initiatives

INITIATIVE 01 Rare Sugar Hub Thailand's first Allulose production facility — targeting US, EU, Japan, and Korea export markets. Leveraging Thai cassava supply chain and proprietary enzymatic conversion technology.	INITIATIVE 02 ASEAN Expansion Regional partnerships in Vietnam, Indonesia, and Philippines for water treatment solutions. Target: 3 new country offices by 2027.	INITIATIVE 03 Green Process Innovation Low-energy separation processes using novel membrane materials. Goal: 30% reduction in energy consumption per unit by 2028.

VISION

"To become ASEAN's leading separation technology provider — delivering innovative, sustainable process solutions that transform raw materials into high-value products for global markets."
